DETAILED ACTION

Introduction

1. Applicants' amendments and remarks filed on 1/21/2009 have been entered. Claims 1, 2, 5 and 7 have been amended. New claims 8-10 have been entered. Claims 1-3 and 7-10 are active.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. In response, after a careful reconsideration, since the newly amended independent claims 1 and 7 contain unsupported new matter, it is rejected as set forth below. Further, since Andrieu et al. reference lacks a teaching of the abovementioned new matter, it has been withdrawn, and to be reinstated, if appropriate, after the new matter issue is resolved.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 1-3 and 7-10 are rejected under 35 U.S.C. 101 because the disclosed invention is inoperative and therefore lacks utility.

More particularly, the newly added limitation in independent claims 1 and 7
“... the coat of the chemical-resistant polymeric compound covering the porous film base
is not porous ...”

renders the claimed invention inoperable and therefore lacks utility. Specifically, the claimed invention relates to porous films used in membrane separation techniques [specification, pp. 1, ll. 10], and the last line in independent claims 1 and 7 recites that “the porous film maintains the properties of the porous film base”, i.e., required communicating microporous structure is maintained. It is unseen that how the coat, which conforms to the porous base film, would have a non-porous structure. Further, it is unseen how a porous film with a non-porous coat is capable of maintaining the necessarily required communicating porous structure. One of ordinary skill in the art would recognize that a non-porous coat is inoperable for use in membrane separation techniques.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

7. Claims 1-3 and 7-10 are also rejected under 35 U.S.C. 112, first paragraph. Specifically, since the claimed invention is not supported by either a credible asserted utility or a well established utility for the reasons set forth above, one skilled in the art clearly would not know how to use the claimed invention.

Further, the amended independent claims 1 and 7 contain subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Clear support is required in the next reply.

Response to Arguments

8. Applicants' arguments directed to withdrawn reference are moot.
